 [LinkedIn](#) |  [@rmkaaaaaa](#)

Summary

Computer Science student at Belarusian State University (FAMCS), focused on Machine Learning and data analysis. Experienced in applying machine learning algorithms, performing exploratory data analysis (EDA), and building gradient boosting ensembles. Actively participating in Kaggle competitions and improving model performance through experimentation. Also build Telegram bots and AI automation pipelines. Interested in Machine Learning internships.

Projects

F1 Pit Stop Strategy Prediction

[GitHub](#)

- Built a binary classification model to predict pit stop decisions during Formula 1 races.
- Engineered domain-specific features (tyre degradation, race progress, pit-pressure indicators).
- Trained and tuned gradient boosting models (XGBoost, LightGBM, CatBoost) with StratifiedKFold cross-validation.
- Combined models via weighted blending and Logistic Regression stacking, evaluated with ROC AUC.
- Performed hyperparameter optimization .

Telegram Bots & AI Automation

- Developed Telegram bots in Python (aiogram) integrating LLMs for conversational features.
- Built AI automation workflows with n8n to connect LLMs, APIs, and external services.
- Worked with local LLMs through Ollama for offline inference.
- Containerized applications with Docker for reproducible deployment.

Machine Learning Coursework

[GitHub](#)

- Performed exploratory data analysis (EDA) and data preprocessing.
- Implemented and evaluated multiple ML models: KNN, Linear Regression, Logistic Regression, Naive Bayes, Decision Trees, SVM, Random Forest, Gradient Boosting.
- Compared model performance and selected appropriate approaches for different tasks.
- Visualized data using Matplotlib and Seaborn.

Kaggle Experience

- Active participant in Kaggle competitions.
- Ranked 789/4890 (Top 16%) in House Prices: Advanced Regression Techniques competition using Logistic Regression.
- Ranked 885/4317 (Top 21%) in Playground Series S6E1 using Logistic Regression.
- Ranked 1054/4315 (Top 25%) in Playground Series S6E4 using model stacking (CatBoost, LightGBM, XGBoost, SVM) to improve accuracy and model diversity.

Education

2025 – Present **Belarusian State University**
Faculty of Applied Mathematics and Computer Science
B.S. in Applied Informatics

Skills

Programming Languages	C++, C#, Python
Machine Learning	KNN, Linear Regression, Logistic Regression, Naive Bayes, Decision Trees, SVM, Random Forest, Gradient Boosting (XGBoost, LightGBM, CatBoost)
Data & Libraries	NumPy, pandas, scikit-learn, Optuna
Visualization	Matplotlib, Seaborn
Tools & Automation	Git, GitHub, Docker, n8n, Ollama, aiogram, Qt
IDEs	PyCharm, Rider, CLion, Visual Studio, VS Code
Concepts	EDA, data preprocessing, model evaluation, ensemble methods (stacking, blending), cross-validation, hyperparameter tuning, feature engineering

Achievements

- Participant in regional olympiads in mathematics and physics

Languages

Russian	Native
Belarusian	Native
English	B1 (Intermediate)
